Our Solution for

Inventory Control

Your company's inventory is without a doubt, one of the largest and most difficult assets most companies must manage. Correctly managing inventory can be the single most effective way to improve your bottom line. Reducing inventory and at the same time, increasing order fulfillment ratios is the goal of our inventory control system. This system handles multiple locations and comes with a serialized inventory option. A complete physical inventory process is provided with the ability to do cycle counts.

Inventory Management

Our inventory control system is designed to put all the information you need at your fingertips. Whether you are searching for an item, entering new items or creating a new bill of materials assembly, our software will guide you all the way. Our extensive search programs will help you locate any item quickly with a minimum of effort. Item searches can be performed by item number, description, category, serial number, model or item parameter. Our inventory inquiry will show all information and transactions for any item. Sales and purchasing history by item, category or product can be viewed at any time. Items can be cloned or deleted as needed.

Serialized Inventory

This module can be combined with our fixed asset module to allow a completely integrated serialized inventory system for customers needing to receive, warehouse and sell items by serial number. This system will handle up to three alternate units of measure with several pricing options for each item. Item costing and pricing can be done at the serial level. Serialized inventory can be depreciated using several standard methods if desired.

Physical Inventory

This system comes with a complete physical inventory system. You may count one location or all locations at one time. The system assigns a tag number to each item to be counted before printing count sheets. Labels can be printed for bin tagging if desired. Count tag entry is quick and easy. Counts can be edited and compared before posting. The system has a physical count inquiry that will allow viewing of all counted activity until the next physical inventory is taken. The system also comes with a cycle count process that will allow counting of up to thirty items each day.

Faxing and Emailing

One of the best features of the inventory control system is the ability to fully integrate with our other modules. Often times, important information such as inventory aging reports, recommended purchasing reports and other information needs to be quickly distributed to buyers, managers or vendors. By adding our faxing and email modules, you can get your information to the people that need it in a quick, efficient and secure manner. This integrated package provides the ability to email any report generated by the system. You may also fax reports without leaving your desk.

I/C System Features and Highlights

- *Multi-user Capability*
- *Automatic Min and Max Calculation*
- *Supports Non-Stock Items*
- *Handles Standard Cost, Average Cost or Last Cost*
- *Extensive Search Capabilities*
- *Tracks Inventory by Category*
- *Bill of Materials*
- *Item Substituting Allowed*
- *Physical Inventory Module*
- *Multiple Locations*
- *Quantity Pricing*
- *Multiple Unit of Measures*
- *Printing Options Available for Reports*
- *Supports Faxing of Reports*
- *Email PDF Formatted Reports*
- *Archiving of Reports*
- *Full Printer and Output Control*
- *Extensive Printing/Output Capabilities*
- *User Level Security, with Company/Location Permissions*
- *Ability to Archive Reports, Post Listings or Selected Reports*
- *Three Month Warranty*
- *On-line Technical Support*
- *Toll-free Telephone Support During Warranty*
- *Source Code Included*

All CSS software is written exclusively for the IBM iSeries/AS400 server. If you do not have an iSeries server, CSS can provide you the latest in IBM hardware custom fit for our software applications. If you do not want to purchase an iSeries server ask about our low cost online option. The I/C module comes as part of our integrated package or can stand-alone.

Inventory Control Menus

The Inventory Control System is designed to provide easy use through three user-friendly menus.

```
INVMENU1          COMPUTER SOFTWARE SOLUTIONS
CSS              Inventory Control Menu 1

Select one of the following:

 1. Inventory Master Maintenance      13. Bill of Material Maintenance
 2. Inventory Master Inquiry          14. Bill of Material Inquiry
 3. Inventory Serial Maintenance      15. Bill of Material Where Used
 4. Inventory Serial Inquiry          16.
 5.                                   17.
 6. Inventory Quantity Inquiry        18. Calculate Item Mins/Maxs
 7. Inventory History Inquiry         19.
 8.                                   20. Inventory Listings
 9.                                   21.
10.                                   22. Additional Inventory Menu
11. Inventory Transaction Entry       23. Physical Inventory Menu
12. Inventory Transaction Lists       24. Return to Main Menu
                                      30. Display I/C Documentation

Selection or command
====> _____
```

This is the first and main inventory control menu. It contains the most used programs including the item master maintenance, item inquiry, serial maintenance/inquiry, bill of materials processing and the inventory transaction entry/listings. You may also print any inventory report from this menu.

This is the second inventory control menu. It contains the maintenance programs that are used for initial system setup. It also includes all the inventory control reports, end of month procedure and the I/C parameter maintenance program.

```
