Our Solution for

Point of Sale

Been looking for a good point of sale software package that will do what you need without putting you in the poor house? Are you shocked at the price of a modern iSeries/AS400 based POS system? CSS has custom designed our POS system to be flexible, user-friendly and most of all cost effective. This system is multi-performing and provides all the functions you would expect from a fully integrated POS system. Whether you have ten stores and need a hundred state of the art cash registers with full scanning and display capabilities or one store with a couple of terminals and a cash drawer, our POS software will provide for all your current needs and give you plenty of room for future growth.

User Defined Transaction Codes

Our retail point of sales system is designed to give you all the flexibility you need by offering a full compliment of system and user-defined transaction codes that can be used to handle any type of retail transaction. Using these powerful transaction codes will allow you to customize the POS system to your specific needs. Users can setup transaction codes to perform any function inside the POS system as well as transaction codes that will take them to any other programs within the system. All sales, inventory and general ledger reporting can be tracked by transaction codes.

Customer/Non-Customer Based Processing

This POS system provides two types of retail sales processing. You may choose between customer based or non-customer based retail sales processing. The POS system will allow any number of payments and payment types to be made on any transactions. Users can setup new customers, take a payment on account, add money to a gift card, setup a layaway or view a customers account history all from inside the POS program. The POS is fully integrated with our general ledger system and will make all general ledger entries automatically.

Serialized Inventory Option

This system comes with an integrated serialized inventory system that is capable of tracking and allocating any type of serialized or non-serialized inventory. All serialized inventory is tracked and allocated through our fixed asset system that is included in this package. The system tracks on-hand quantities, on order, committed, backordered and available quantities for all items. You may generate new purchase orders for any backordered item automatically. Picking tickets and order confirmations can be generated, printed or emailed as desired.

Interactive Credit Card Processing

Having trouble meeting the new requirements for accepting and storing customer credit card numbers? With all the new laws concerning the electronic tracking and storing of consumer credit cards, many companies are in danger of receiving large fines or other penalties for failing to meet all government requirements. Our credit card software lets you collect and store any number of credit cards for a customer. The system will store all credit card information using the encryption methods required by the government. Your customer's credit cards are safe with this system.

For customers requiring interactive credit card and debit card processing during retail sales, CSS offers our POS system with a fully integrated credit card processing software option. Our credit card software will provide quick authorization and approvals of any type of credit or debit card in an online environment. This feature is optional and is not required to be purchased to use our POS system.

Rental/Maint/Repair Contracts

This POS system comes with the ability to setup rental contracts for customers wanting to allow rent-to-rent or rent-to-own contracts. Contracts can be created with user-defined terms and payment methods. Recurring billing can be setup for monthly billing. Credit card payments can be generated automatically as well. The system will track all payments and can add late fess or other charges to contracts if needed. There is a rental credit facility to allow rental credit accumulation and application. Users can setup warranty or maintenance contracts for any purchased item. Maintenance contracts can be setup for automatic monthly billing and credit card payments if desired. The POS system has a built in repair order system that is capable of taking in items to be repaired, printing repair orders and allowing repair parts and labor to be tracked through the repair.

Point of Sale Menu

The Point of Sale is designed to provide easy use through one user-friendly menu.

```
POSMENU1              COMPUTER SOFTWARE SLUTIONS
 CSS                      Point Of Sale Menu 1

 Select one of the following:

  1. Counter Program
  2.
  3.
  4.
  5.
  6.
  7.
  8.
  9.
 10. Work with Printers
 11. Work with Fax Queue
 12. POS Parameter Maintenance

 ===>
 _____
```

This is the main menu of the POS system. It contains the POS entry program. This is usually a mandatory menu for POS users. All needed functions will be available from inside the POS entry program.

Point of Sale Pricing

Software Pricing

Our POS system is licensed as a completely integrated system that includes most of our other software modules. To keep our system affordable to the smaller retail clients needing only a few POS stations, CSS charges a one time licensing fee for our POS system based on the processor size of your iSeries/AS400. This license fee includes up to fifteen POS retail stations. Larger clients needing additional POS stations may purchase additions stations in lots of fifteen. This license fee is for software only and does not include hardware.

Hardware Pricing

Our POS software is designed to work with many different types of cash registers, printers, scanners and display stations. If you already have all your hardware give us a call, we may be able to save you money by using your existing equipment. For clients needing to purchase cash registers, credit card receipt printers or other POS equipment, CSS can provide you the hardware that works best with our software. All hardware is quoted separately.

Please contact our office for more information or to schedule an on-site demo of our Point of Sale software.
